

The DFG-funded Research Training Group 2660 on the *Neural mechanisms of (mal)adaptive approach and avoidance behaviour* invites excellent young scientists to apply for a

## **Ph.D. position (German TV-L scale E13, 65%)**

In the **Experimental Clinical Psychology research group** (led by **Matthias Gamer**). The position is funded for a duration of three years and the preferred starting date is June 1<sup>st</sup>, 2025 (a later start might be possible).

The RTG 2660 offers the unique opportunity to join a strong interdisciplinary team of researchers with a shared interest in studying approach and avoidance on multiple descriptive, interferential, and analytical levels. The research program emphasizes on the translation of findings from basic to applied research and from animal models towards humans.

The RTG 2660 is well embedded in the highly active neuroscience community in Würzburg and can rely on a broad, state-of-the-art technological and methodological infrastructure for experiments in animal models as well as for human experimental studies and research on patients. The program is complemented by seminars, courses, hands-on workshops, writing and presentation training as well as mentoring and career development opportunities.

We are seeking highly qualified students holding an M.Sc. or equivalent degree with a background in Neuroscience, Psychology, Cognitive Science or related fields. Expertise in experimental psychology or psychophysiological/ neuroscientific methods is desirable. Although programming skills are not mandatory, some experience with Matlab, Python, R, Presentation or related software is highly appreciated.

The University of Würzburg is an equal opportunities employer. Applications of women are thus especially encouraged; applications of disabled persons will be given preferential treatment to those of other candidates with equal qualifications.

To obtain further information about the RTG 2660 please visit our website:
