### Research Interests

My area of research focuses on exploring the complexities of approach-avoidance conflict. Specifically, I am intrigued by how different levels of reward impact decision-making and use it as an important tool for testing. In addition, I am curious about understanding how punishment influences the dynamics of aversive motivation in situations where individuals face conflicting impulses to approach rewarding stimuli and avoid aversive ones.

### Here are some suggestions for students:

- a) **The Impact of Reward Levels on Decision-Making:** How do rewards adjust the balance between approach and avoidance tendencies?
- b) **Implementing Approach Incentives to Minimize Avoidant Behaviors:** Examine the effectiveness of implementing approach incentives to minimize avoidance behaviors associated with threatening stimuli.
- c) **Understanding the Effect of Punishment on Aversive Motivation:** How do various types of punishment affect aversive motivation during approach-avoidance conflicts?
